green purchasing

help the environment  
and the local economy

## the future

We are all aware that environmental issues and in particular climate change are increasingly in the news. More and more people are noticing the effect that changes in the environment have on our daily lives and the associated rising cost of items we take for granted, such as energy, water and waste disposal. All of us should be using the most sustainable products and services we can find now and in the future. Sustainable eco-enterprises enable us to do this – they make up an expanding sector whose growth we need to support as the businesses of the future.

Businesses of all kinds are looking to reduce their costs and environmental impact by introducing green purchasing. This directory collects together a diverse range of businesses offering environmental products or services in East Sussex. Opportunities are certainly increasing for these businesses and it is encouraging to see the growth in activity in the sector since the 2006 version of this Directory.

However, many organisations in the sustainable eco-enterprise sector are small local companies and need assistance to manage and benefit from these growth opportunities. Networks and other support organisations are being set up to promote the sector and this will greatly assist the businesses in making the most of the opportunities available to them in the future as well as developing the sector overall. These support structures are detailed in the final section of the directory.

Historically East Sussex has had a largely rural and tourism focus to the economy. The environmental sector is now increasingly important and this provides a real opportunity for the county to add another “string to the bow” and provide more jobs in new, interesting and growing eco businesses.

I hope you find this directory useful and if so please pass it on to others. It is also worth remembering that by using these companies you are supporting your local economy with all the associated benefits for jobs and growth while simultaneously reducing environmental impact.

Yours sincerely

Nick Hutchinson

### Green purchasing - the benefits

This directory helps you find local businesses providing environmental products and services, that is “sustainable eco-enterprises”. By using these suppliers you will be able to improve your environmental performance, as well as helping the local economy. You may also save money, for example by recycling or becoming more energy-efficient.

The directory is split into 4 broad business categories:

**Renewable Energy**

**Sustainable Construction and Maintenance**

**Recycling and Waste**

**Various – grouped by activity**

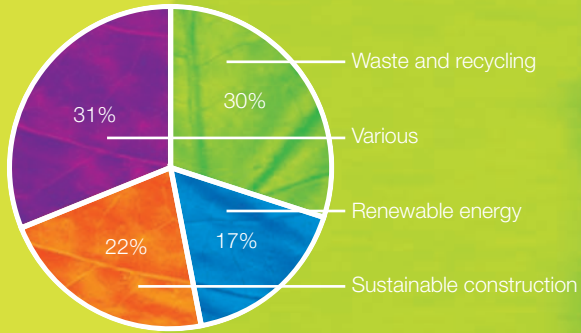

### Business support and information

Organisations providing support to sustainable eco-enterprises as well as general business support in East Sussex are included in a separate section at the back. This includes resource efficiency programmes – helping businesses save money while reducing their environmental impact.

To find out more about the Sustainable Eco-Enterprise project and East Sussex “betre” (business excellence through resource efficiency) go to [www.ecosys.org.uk](http://www.ecosys.org.uk) or [www.betre.org.uk](http://www.betre.org.uk) where this suppliers directory is also available online. .

# sustainable eco enterprises in east sussex

This map shows the growing clusters of sustainable eco-enterprise across East Sussex.

According to the South East England Development Agency (SEEDA) this is the fastest growing sector across the region, contributing to both environmental improvement and local economic development.

This directory, which has a focus on small to medium sized enterprises (SME's), has been produced using Interreg IIIA European funding – part of a project covering East Sussex, Kent and Nord pas de Calais to support and promote “Sustainable Eco-Enterprise” in these areas. The project's other outputs include: business reviews and support; promotional opportunities, such as exhibitions and conferences; training events; case studies; and developmental work to raise the profile of the sector. The project has also carried out a number of thematic studies looking at specific topics, such as the renewable energy industry in Kent and East Sussex.

This directory is also available online at [www.ecosys.org.uk](http://www.ecosys.org.uk) or [www.betre.org.uk](http://www.betre.org.uk)

Putting this directory together is a work in progress and cannot be an exhaustive list of sustainable eco-enterprises in the county. Unfortunately some businesses will have been overlooked and some missed due to funding constraints.

Any missing companies can contact us at [admin@ecosys.org.uk](mailto:admin@ecosys.org.uk) or on 01273 245587 so we can add you to the SEE database and include you in any future directories produced, as well as providing information on other project opportunities.

Your guide to choosing sustainable products and services from local suppliers. This directory contains over 180 local suppliers ranging from paper recyclers to timber-frame builders to biodiesel producers. There is a focus on three key sectors: renewable energy; sustainable construction; and recycling and waste. Other suppliers range from bird dispersal to environmental consultants to water recycling.

Also includes over 80 business support organisations, some providing general business support and others with a focus on the three key sectors, ranging from trade associations to organisations providing advice on saving money through resource efficiency measures.

Using this directory will help to sustain the local economy, as well as improving your organisation's environmental performance.
